Inspiring Graz Congress 10-11 September 2022

A total of 220 participants came together on the weekend of 10-11 September in the Steiermarkhof in Graz, which is somewhat decentrally located in the countryside, to immerse themselves in the topics of "Cosmic Energy in Technology and Healing". Conclusion: a complete success with an enthusiastic atmosphere!

The importance of the tie

Even before the official welcome, Inge Schneider pointed out a peculiarity of her outfit. The WEF in Davos is not particularly popular in her circles, but one had read in the press that a casual style of dress is generally observed there and only the most important participants - heads of state, for example - appear in a tie. She does it the other way round: by wearing a tie, she hopes to emphasise her importance - this is of course a joke, she said, which the audience also acknowledged with laughter.

Adolf Schneider welcomed participants from Germany, Austria, Switzerland, Luxembourg, Italy, Romania, Hungary and Slovenia - almost all of them had flags on the speaker's table.

Inge Schneider welcomed three people in particular: Willy Mohorn, the president of the Austrian Association for Space Energy, who had massively promoted the congress; Detlef Scholz of "raum & zeit", whose special issue "Natureener-

The book "Fundamentals of Free Energy" by the Austrian authors Harald Chmela and Wolfgang Wiedergut, which had been out of print since 2004 and was newly published by Jupiter-Verlag, was published in time for the congress.

Adolf and Inge Schneider welcomed a total of 220 participants to the Graz Congress.

The organisers are pleased with the great response. Photo: Michelle Mohorn

gien nutzen" contains topics that will also be discussed at this congress; and Bart Berten, their first sub-licensee of the Marukhin technology and now dear cooperation partner, with whom together they can finally help a free energy technology achieve a breakthrough. The book "Fundamentals of Free Energy" by the Austrian authors Harald Chmela and Wolfgang Wiedergut in her hand, she referred to the new edition just published by Jupiter-Verlag. She thanked the team that was responsible for the smooth running of the Congress: Susanna Martin, Gabriele Schröter, Dagmar Kuhn, the photographer Rio Werner Hauser (thank you for the great photos!) and the Austrians Stefan Ressler and Michael Zimonic.

Adolf Schneider also thanked Peter Kaiser from the Tesla Society Switzerland, whose Tesla exhibition they were again able to show.

Space energy - the ultimate energy of the future

Willy Mohorn was greeted with warm applause from the audience. In fact, the participants agreed afterwards that his lecture was a basic presentation that laid the foundation of understanding what free energy actually is. With his Aquapol drainage system, of which he has already sold 56,000 units, he has been proving for more than 30 years that space energy can be used without the supply of electricity.

Space energy is "ultimate" because it interacts with matter. Although it has long been proven and was already used by Nikola Tesla, it is still ignored by school physics today. Yet our galaxy is kept running by space energy. A symbol for this is the torus.

He speaks of Prakriti from the Vedas (the oldest religious scriptures on earth), the eternal and all-pervading physical primordial energy with which the universe was created. It is the driving force for all future forms of energy and matter (as Nikola Tesla also recognised). In the Aquapol® generator, for example, the so-called gravomagnetism works, one of the (many) manifestations of space energy. Weltweit über tausend denkmalgeschützte Gebäude

Ing. Willy Mohorn calls on investors to participate in his desert greening project in Israel.

Photo: Michelle Mohorn

wie das Parlamentsgebäude in Budapest, das Schloss Reitenau und viele andere wurden mit diesem Verfahren der kapillaren Mauerentfeuchtung getrocknet.

As further space energy technology, he mentioned the Jupiter generator by Rolf Kranen, but also the autonomous energy generator by Maxwell Sangulani Chikumbutso from Zimbabwe, which is presented in the film "Thrive II".

Finally, he presents the most recent three-year research project in Israel: 6 weeks without rainfall, and the soil moisture had increased significantly due to the set-up Aquapol® generator for soil humidification up to a depth of 2 metres! It caused (in the medium term) up to 60% higher yields in the fruit harvest and savings in groundwater. It would be possible to make the desert fertile with this process. He is looking for investors for this.

In the lively discussion, Stefan Ressler asked where he got the information to develop his system and how he managed to implement it technically? Willy Mohorn only answered that he believed in reincarnation...

To the question of another participant whether one could also heat with Aquapol, he answered: No, you need a different technology for that.

and www.oevr.at

Solar thermal energy in year-round use

It is obvious that the solar thermal process by solar expert Gebhard Keckeis, which has been tested in practice several times, is gaining importance in the energy crisis. He had already presented the process at the congress of 18/19 June in Stuttgart (see "NET-Journal", No. 7/81), so we will be brief here.

Adolf Schneider introduced Geb-

Solar expert Gebhard Keckeis points the way to the energy future with his solar storage.

hard Keckeis as the winner of the Solar Energy Award 2018. The speaker explained that it was about energy cycles and that he, as a child of nature, had found his own way to do this. It corresponds to his basic ethical attitude to use solar energy, which the cosmos provides free of charge. By storing the solar energy in the masonry and gravel under the buildings in summer, the energy is available in winter. This results in an energy cycle.

Gravity heating is also part of his concept. He explains that he equips two to three houses with it every year. In 1998, he built his first house of the future, the "Linsenhaus", which has been functioning self-sufficiently in terms of energy since then.

For self-sufficient operation, his buildings require just wood as build-

The "Linsenhaus" was built in 1998 by G. Keckeis as a self-sufficient house of the future.

ding material, a solar system and a concrete storage tank. Depending on the subsoil, an energy storage capacity of 50 to 100 kW/m³ is achieved. At the natural cosmetics manufacturer Metzler in Egg/Vorarlberg, the gravel box has a storage volume of 75 kW/m³. "This results in a storage capacity of 65,000 kWh there," says Gebhard Keckeis. A closed solar-energy cycle takes place there. With a usable area of 280 m², the energy costs amount to just 180 euros/year.

He addresses the participants with the appeal: "It is up to us to use solar energy sensibly".

In the discussion, some of the participants mainly refer to the speaker's great wealth of experience, which has the consequence that the process is hardly ever used outside his company. www.energie-werkstatt.at/

Resonance products - a basic principle of free energy

All one can say about this product is: small cause, big effect! Dipl.-Ing. Joachim Wagner first expressed his delight at the lecture by Gebhard Keckeis, who had made it clear that there is enough energy in the universe. Joachim Wagner uses this energy in the form of a chip, the "Harmony Chip", which can be most closely associated with quantum physics. He mentioned his recently deceased mentor Karma Singh, who had contributed significantly to the development of the legendary Harmony Chip. Geometry plays a role, he said, but above all the chip's property of restarting the flow of electrons in electrical and organic systems (technology and health). As an example, he mentioned the effect of the chip on trade fair visitors.

Picture 1: The energy level of visitors to the trade fair was measured by computer. Joachim Wagner holds the Harmony chip in his left hand.

Picture 2: Afterwards, the Harmony chip was fixed on the back of the fair visitors for five minutes.

Their energy levels were recorded by computer measurement. Afterwards, the Harmony chip was fixed on their backs for five minutes. The subsequent computer measurement showed a much higher energy level.

It is a fact that the chip resonates with the system or the organism. There are many positive reports^{2,3}. The technology is optimised, electromog dissolves, water veins are reduced, etc.

In response to a question from a participant in the discussion as to whether the Harmony Chip has an effect on the energy state of the human being, Joachim Wagner replied that the chip brings human energy to life. This has also been shown with athletes.

www.harmonyunited.com

Figure 3: The computer measurement carried out afterwards showed a significantly increased energy level.

Plant code decoded!

Chrissie and Dr Fritz Florian have jointly developed a method to make plants grow as they did in primeval times. Read also the report on the lecture at the congress of 18/19 June in Stuttgart in No. 7/81. As there, Dr. Fritz Florian also showed the professionally designed

Dr Fritz Florian and Chrissie with a home-grown plant.

film "Bio-Tesla-Technology" in Graz, which clearly shows all the connections of primeval plant growth and its applicability today^{4,5}. See also the article "Weisses Rauschen bewirkt Leben" in the "NET-Journal", No. 7/8 2021, on the newly published book "Pflanzencode entschlüsselt" ⁶ by Jupiter-Verlag, which shows that germination only takes place via bioresonance.

Conclusion: Natural seeds germinate and grow very slowly. However,

The couple Fritz and Chrissie Florian thanked the organisers with a bottle of pumpkin oil and a plant they had grown themselves.

when they are exposed to low-frequency electromagnetic fields before sowing, their growth accelerates rapidly.

The whole thing actually started with an experiment by Chrissie Florian, who found that suffering plants could be revitalised in two seconds by placing an aluminium cone over them.

According to Dr. Fritz Florian, the same was then found with trees and vines that were wrapped in aluminium foil. The user can easily do the experiments himself by obtaining the KeimMiBio resonance cultivation set from Dr. Florian. This provides natural conditions for seed germination and plant growth by:

1. converting white noise into scalar waves;
2. correct scalar or longitudinal germination frequencies;
3. correct dosage of light, water, soil, temperature.

He said that he had received hundreds of e-mails from people who had successfully reproduced his experiments after using the KeimMiBio resonance cultivation set. Finally, Dr Fritz Florian referred to the vexed topic of waste food. All kinds of vegetables and fruit stay fresh longer in aluminium foil and do not have to be thrown away.

Greeny Garden - the plant revolution at home with the help of Tesla coils

Silvie Müller brought a breath of fresh air to the congress. Presenting the greeny plant revolution, she herself seemed to resemble a plant in a green outfit with root-like hair. She wanted to support the body to find its way back to healing. With Greeny Vertical Farming, everyone can grow healthy plants at home and thus become independent of supply chains and pre-traced paths. The Greeny Garden ensures that everyone can have high-quality organic vegetables, such as herbs, tomatoes, cucumbers, salads and much more, freshly harvested and

Silvie Müller shows a basket with 33 tomatoes and explains that one tomato from the Greeny-Garden contains as much nutritional value and vitamins as 33 tomatoes from the organic food shop.

Silvie Müller at the Greeny stand in front of the congress hall.

on their plates all year round! Regardless of season and location, the Greeny Garden makes it child's play to grow nutrient-rich and healthy vegetables, from seed to full-grown plant.

When she read an interview with a Swiss pioneer about this in a magazine, she was electrified. She realised that she herself was missing this product for self-sufficiency. This worldwide unique growing system is not only a necessary method of planting, but also fun. Her goal, and the goal of many others, is to leave no footprint on the earth. .

The integrated Tesla coil enables faster plant growth, and the

Greeny-Garden is combined with the high-frequency technology developed by Arthur Tränkle with an optimally designed water circuit. Heavy metals, hormones, etc. are filtered out. The method requires 95% less water than the 60 m² area otherwise needed for this cultivation. In addition, the vegetables and fruits grown in the Greeny-Garden are much tastier and larger. Silvie Müller had brought thirty-three tomatoes in a basket. One tomato from the Greeny Garden has the same vitamins and the same nutritional value as 33 tomatoes from the organic food shop.

Silvie expresses her enthusiasm for the German entrepreneur and visionary Uli Schwartau, who started the vertical garden project in Mallorca, which is now spreading across the globe. He and other pioneers of greeny gardening have other ideas for self-sufficiency. For example, salt-water batteries are to be printed and produced themselves with 4D printers to generate energy, and much more. Uli Schwartau has grown 800 tomato plants from one bunch of tomatoes. All in all: a new world! This is based on cooperation and mutual support. People today are uncertain, also about the future value of their money. Here they can invest their money sensibly. Silvie herself belongs to one of the first neighbourhood manufacturing factories that produce Greeny-Garden.

The participants are visibly impressed by the authentic and touching presentation and afterwards also visit the stand of Silvie Müller and team in front of the hall.

Breakthrough technology for the energy transition

Hartmut Dobler, CEO of E-Cat-Deutschland GmbH, had already given a presentation on the Rosch buoyancy power plant at the Stuttgart Congress on 18/19 June. Read the report on this in the "NET-Journal" 1. In 2016, an autonomous 8-metre-high plant stood for a few months in Spich near Cologne with an input of 4 kW and an output of 65 kW. However, the company could not make a living in Germany, so it moved to Thailand, where it has already commissioned a 100 kW and a 500 kW power plant. These plants have been tested by SGS and TÜV. They have a COP of about 60:1. In a time of energy scarcity and impending electricity shortages, one might expect, according to the speaker, that politicians would pounce on such technologies. But the opposite was the case. Instead, there was a character assassination campaign against the company in Germany. Yet the KPP (Kinetic Power Plant) is the problem solver par excellence: it produces no emissions and no hazardous waste and runs continuously, around the clock. Con-

Not only the smallest participant was impressed by Hartmut Dobler's explanations about Rosch's autonomous buoyancy power plant. A model of the paternoster is visible in the background.

clusion: "We have entrepreneurs, but not brave ones!"

A 20 MW plant is under construction in Thailand. The technology, which can be purchased from 5 MW and consists of 500 kW modules, has its price. It costs 20 million euros. Fortunately, the Thai government is promoting this technology because a lot of electricity is needed in the country and in remote areas. He concludes by saying that investors are being sought who can block at least 30 million euros for financing plants in Europe.plant.

www.e-cat-deutschland.de

The Highlight!

The highlight of the congress was not an energy machine, but the appearance of Willy Mohorn as a singer, who accompanied himself on the guitar.

Immediately the audience started clapping their hands in time, the smallest participant was given a ratchet in his hand and Andi Daniel on the piano set the snappy rhythm. You could see all the smiling faces.

Everyone knew the melody "The Old House of Rocky Mocky", but the fact that Willy Mohorn had written his own lyrics to it was lost in the jubilation and hubbub. That's why we are reproducing the text here 1:1, because it's worth it. Once again, congratulations and admiration to Willy for his original humorous poetry!

1. This house is damp and musty, yes, the dampness is getting to it; And the people are not well in it, and it gives you no peace! This house is cold and draughty, And the plaster is falling off the wall, And the mould is making people sick.

Refrain: Rocky Mocky's damp house has seen a lot, no wonder it's musty, no wonder it shakes, Rocky Mocky's damp house has seen a lot, but this mustiness, it's got to go!

2. This house needs urgent help, this house needs Aquapol, this house doesn't want any intervention, I'll get the consultant, this house wants to get dry without metal panels, and with chemicals and electricity and electricity.

Refrain: The damp house of Rocky Mocky has already experienced many things...

Willy Mohorn surprised everyone with his skilful free energy song!

3. This house is happy today because it now looks gorgeous, Aquapol is now in the house and the wall dampness is out! All the people, the dog and the cats feel very comfortable now, because the Aquapol is already hanging in the house!

Refrain: The damp house of Rocky Mocky has already experienced many things, now it has dry walls and today it's shaking with joy, Rocky Mocky's old house has seen a lot of things, But this feel-good state, it'll never go away.

4. The moral of the story: If you have Aquapol in your house, despite the critical voices, it will drive the wall moisture out. Nature knows better, only science says no, but the house feels good and also quite fine! The old house of Rocky Mocky...

5. The congress in this hall is finally getting underway, Free energy is today's topic, now it's falling into everyone's lap, Everybody's waiting to see what this Saturday will bring, but in the meantime we sing this new refrain:

Refrain: The great hall of the Steiermarkhoof has already experienced many things, if the walls could speak, the floor shakes with joy, the great hall of the Steiermarkhoof has seen many things, But this free-energy congress, it leaves mouths agape!

Ing. Willy Mohorn sings the free energy song: You had to see and hear that!

Die begeisterten Veranstalter danken Willy Mohorn für seine Performance.

6. if you want to know how to use free energy, listen to all the speakers at your leisure;

and if at the end of the day you are also very satisfied,

why don't you tell your grandmother and your dear child?

The large hall of the Steiermarkhoof has experienced many things,

when the walls could speak, the floor shakes with joy;

the great hall of the Steiermarkhoof has seen many things,

but this free-energy congress is a mouthful.

When the congress is over, everybody goes home happy, everybody makes plans what to do at home, whether to invest in Rossi's cube or in the super-boiler, if there's not enough money, then pedal on the home bike and produce electricity. Refrain...

Applause followed without end!

Free energy in the home and in industry

With his song, Willy Mohorn had, as it were, introduced the following presentations by Adolf and Inge Schneider and Bart Berten. Compared to the lecture Adolf Schneider had given at the Congress of 18/19 June in Stuttgart¹, he was able to report something new on the subject of magnetic motors, in that they invited Dennis Danzik, the inventor of the IEC magnetic motor to the next Congress on 17/18 June 2023 in Stuttgart-Fellbach - and he accepted! This magnetic motor has an output of between 8 and 25 kW, depending on the setting of the number of revolutions, and has a COP of 48:1.

Andrea Rossi now also offers 1- and 2-MW units: 1 MW consists of 10,000 and 2 MW of 20,000 SKLeps.

As far as the magnetic motors of Infinity SAV from South Korea are concerned, there is contradictory information. On the one hand, this division is said to have been bought up by a large corporation after the death of the inventor Andrii Slobodjan. A distributor is said to have access to the purchasable generators, but has not yet delivered anything. On the other hand, Infinity SAV's worldwide distributors are trying to get the magnetic motor ready for series production. Roberto Reuter of GAIA will report more on this on Sunday. See also the report starting on page 23!

New products from Andrea Rossi!

Andrea Rossi presented the 100 WKLeps, which require just 1 W of input, in an online demo on 9 December 2021. The efficiency of 100:1 was confirmed by the University of Bologna. A super thing, if it weren't for the crux that Andrea Rossi only delivers when he has reached 1 million orders. At the moment, more than 800,000 orders are said to have been received, but Andrea Rossi does not disclose current figures even to the organisers who are friends of his. Probably to make up for the gap, he has now scaled this technology down to a 10 W generator (cost: 25 USD) and up to a 1 and 2 MW system.

Stefan Ressler from the Austrian team was interested in a simple description of the SKLep.

In her description, Martina Haberler-Maier places the SKLeps in the context of Nikola Tesla's developments. She asks: Free energy - what is that?
see: www.borderlands.de/Links/SKLep-fuer-Laien.pdf

In her description, Martina Haberler-Maier places the SKLeps in the context of Nikola Tesla's developments.

The 1 MW unit contains 10,000 SKLeps and costs 2.5 million USD, and the 2 MW unit is equipped with 20,000 SKLeps and costs 5 million USD. Andrea Rossi apparently hopes to increase the number of SKLeps in order to soon reach the 1 million mark in orders.

Adolf, in agreement with Andrea Rossi, had started a collective order of the 100 SKLeps (so far more than 3'000 SKLeps have been ordered) and had answered hundreds of e-mails and questions for months (on a voluntary basis!) and

dedicated hundreds of working hours to this cause altogether. Nevertheless, readers and congress participants still asked questions about how it works. For example, Stefan Ressler from the Austrian team asked if there was a simple description. Fortunately, project manager Martina Haberler-Maier was among the participants. She had put together a simple description of SKLeps and Free Energy in cooperation with Adolf, see:

www.borderlands.de/Links/SKLep-fuer-Laien.pdf

State of the art Marukhin technology

Adolf Schneider led over to this autonomous 1 MW technology by Dr. V. V. Marukhin by explaining its function on the basis of the hydraulic ram operated in agriculture. Dr Marukhin designed a system in which the shock valve was replaced by an internally oscillating valve. In a first phase, Dr Marukhin started building large-scale systems that had to be sunk into the sea from 2003. After in-depth studies, Dr Marukhin and team developed a highly compressed, closed system in 2008, in which the pressure of 3,000 bar is artificially generated. Even then, he and his team presented this technology to the Russian government under D. A. Medvedev and V. Putin. But they rejected this development with reference to their income from oil and gas. Due to this non-acceptance, the technology disappeared underground and individual licences were sold in secret only to a few Russian companies. Dr. V. V. Marukhin and his team formed a holding company that moved to Tenerife, where they continue to sell and demonstrate large-scale plants.

Therefore, there was no demo plant of the compressed version when Adolf and Inge Schneider met with other entrepreneurs with Dr. V. V. Marukhin in Moscow in 2016 to enter into licensing negotiations.

Dr.-Ing. V. Koutienkov, who built and is building HEG devices, was also there at the time. Convinced by the technology, they then wrote the book "The Eureka Machine" and published it in the Jupiter publishing house.

They were then able to pay for the general licence themselves in 2020 and have since secured it by selling a sub-licence for Belgium to Bart Berten and his investors. So it had taken them a total of six years to find a cooperation partner in Bart Berten who was as convinced of the technology as they were, without having seen a demo installation. However, his billionaire investors were only prepared to transfer money after Bart had provided his own houses as collateral.

On 26 August, in the presence of Dr.-Ing. V. Koutienkov, a meeting was held in Frankfurt with 25 entrepreneurs to implement the project.

Continued on next page.

Some participants of the Entrepreneurs' Meeting of 26 August 2022 in Frankfurt. Far left: Dr.-Ing. V. Koutienkov from Moscow. He has already built several 1 MW plants in his production facility in Moscow.

Power Plus teflonises the engine and contributes to fuel savings (up to 20%!).

It is a proven (also by the editors) agent - a non-toxic special wax coating - to increase engine performance and savings for a mileage range of up to 100'000 km. It regenerates engines with excessive fuel and oil consumption. According to company information, "the use of a single pack of Power plus allows the user to save up to several thousand euros if he chooses the easily possible eco-economic driving style. By optimising his machine, he also saves high repair costs, which experience shows often enough add up to thousands more in the life of a machine".

Many use the enormous increase in performance of their machine through Power plus (10-20%) to drive more prudently, because they have understood that relieving the burden on our environment is a top priority. Power plus is therefore at the forefront of environmentally friendly products!

Power plus is a special hard wax in a specific formulation, which is added to the normal oil of the engine and gearbox in a ratio of 1:4 to 1:5. Through the action of the engine, all moving engine parts are provided with a thin permanent sliding layer, which prevents metal-on-metal friction.

The engine should have its oil and filter changed at the same time. (Do not leave an old filter, as its oil sump can bind Power plus particles that are needed for the engine coating).

After draining the old oil and changing the filter, first fill the engine with the appropriate amount of Power plus and then fill up with normal oil up to the optimum mark on the dipstick. The engine should be warm during this process.

For gearbox and differential oil, which is left permanently, 1/4 of the respective quantity is removed and replaced with Power plus. It is important to shake Power plus vigorously before each removal to ensure even distribution. Because of the high reduction in friction caused by Power plus, **it must never be filled into automatic gearboxes, but only into manual gearboxes!**

After filling Power plus into the engine, it is advisable to immediately drive the vehicle a distance or to let the engine run at idle for half an hour. The excellent properties that Power plus imparts to all machines and aggregates become noticeable after only a few hours of operation: smoother running, diesel machines lose their harsh nail noise, the machines become more and more rev-happy.

Power plus (88 Euro/ Fr.) amortisiert sich rasch.

The comparison

Inge Schneider compared their latest licensed version of a 1 MW tube, 42 cm high and 15 cm in diameter, with other alternative technologies. On the way here, they saw a heavy transport with a wind energy rotor blade 80 metres long. Such a turbine produces the same

Inge Schneider compares Dr. V. V. Marukhin's 1 MW tube with wind and solar plants, which require much more material (grey energy) to achieve the same output.

amount of energy as Dr Marukhin's 1 MW tube. On the other hand, to achieve 1 MW through solar energy, one needs one and a half football fields full of solar panels. However, Dr. V. V. Marukhin's 1 MW

tube still has to be equipped with a DC-DC and a DC-AC inverter and installed in a container. Nevertheless, the material used for this 1 MW system is minimal compared to other alternative technologies, which, moreover, only work temporarily: when wind or sun are available.

At the same time, she informed about the already mentioned meeting on 26 August in Frankfurt, where 25 entrepreneurs came together to discuss cooperation for the implementation of this technology. Among them was Dr.-Ing. V. Koutienkov from Moscow, who had already built dozens of such devices for other licensees. The intention was to commission him to build 1 MW units, which would be under the supervision of Dr. V. V. Marukhin. Unfortunately, this plan had to be abandoned after the conference when it became clear that in the current political situation, equipment from Russia could not be exported to Europe.

At this entrepreneurs' meeting, it was decided to establish the European NET Forum ENF, which in turn will contribute to the implementation of this and other technology.

Inge Schneider introduced Bart Berten, who has promoted this technology in Belgium and won over rich

Dipl.-Ing. Bart Berten, CEO of the company PED Tech Sense LLC, which bought the Belgium sub-licence, not only has contacts with rich entrepreneurs who want to use the technology in their businesses, but he also wants to make sure that the "man in the street" can enjoy it.

entrepreneurs for it. As collateral, he gave his houses as a pledge. When he told them this, they would have told him, "Welcome to the club of those who give everything for free energy." They count themselves among them, of course.

Bart Berten then explained his strategy for implementing the technology:

In years of work, he has built up contacts with rich entrepreneurs who want to use this technology in their energy-intensive businesses.

On the other hand, it is of great concern to him to let the "man in the street" participate in this technology with various concepts.

In a later issue, we will publish more about this in agreement with Bart Berten.

The audience responded enthusiastically to Bart Berten's explanations.

Impressions in pictures

Stefan Ressler shows the youngest congress participant how to accompany Willy Mohorn's song with the rattle.

Filmmaker Roxana Vossough, who recorded some sequences of the congress.

Dr Florian König's stand with the devices against radiation exposure is very busy.

Michael Zimonic has ventured up the high ladder to hang the posters of the Tesla exhibition.

During the coffee break, the guests like to stretch their feet outside in the park.

The newly published book "Grundlagen und Praxis der Freien Energie" (Fundamentals and Practice of Free Energy) by Harald Chmela and Wolfgang Wiedergut was of particular interest to the congress

The Tesla exhibition was enjoyed by young and old.

After the mental exertion of listening to the lectures, participants enjoy food and conversation.

Attentive audience during the lecture by Ing. Wilhelm Mohorn.

Roland Gumpert came to the congress with his methanol- or electrically-powered van. Inscription: "Drive electric without limits!"

Kissing is allowed: Left: Inge Schneider with Roberto Reuter, right: Renate Quehenberg with Adolf Schneider. Left: Andi Daniel at the piano.

Closing picture of the speakers still present at the end of the congress on Sunday.

Sunday programme

Adolf Schneider welcomed the new guests and gave a programme overview. Gerhard Steinbrunner, who had wanted to speak about his Tesla-Lakhovsky induction therapy device, had to cancel because he had an accident. Instead, Hans-Jürgen Klaussner was now given the opportunity to present his new money

On Sunday morning, Inge Schneider called for no enemy stereotypes.

system. In addition, Dr Florian König was able to talk about his new protection concepts against radiation and electrosmog.

For the time being, Inge Schneider introduced Sunday with a quote from the recently deceased Dr. Helmut Hüsken: "According to the latest findings of quantum physics, there are neither boundaries nor matter, because ultimately everything is energy and vibration. Otherwise it would be incomprehensible that information shows effects that cannot be explained from a purely material point of view. Light and energy are immortal. They are the source of existence and come from God, the originator of all life.

Referring to conversations on the fringes of the Congress, she explained that they do not have any enemy images, not even against the Illuminati, the Freemasons or Klaus Schwab or the Vatican etc.. They have friends everywhere. As an example, she mentioned the Vatican

Bank, which is always being railed against in insider circles. They were friends in Switzerland with a rich entrepreneur with contacts to the Vatican Bank, who told them that he could distribute a Free Energy technology to all worldwide parishes under the protection of the Catholic Church or the Vatican Bank, so to speak. This statement was met with warm applause from the participants (just as on the sidelines of the congress many participants praised Inge for her "courage" in mentioning the name of God).

The latest GAIA projects for home use

Roberto Reuter informed that GAIA stands for self-sufficiency and lives and works according to the

Magnetic motor by Muammer Yildiz with a nominal power of 7.5 kW.

about six hours, the motor had to be shut down because of a problem with the unbalance. Unfortunately, the inventor was not willing to accept their help to solve the problem. He

Roberto Reuter with a fascinating insight into a coil of the Infinity magnetic motor by Andrii Slobodian.

motto: "Together we succeed where the individual is denied."

In addition to the energy theme, GAIA deals with the topics of health, nutrition, medicine, following Gerhard Keckeis' insight that nature has simple solutions in store. Magnetic motors had always been at the top of their to-do list, for example that of the Turkish inventor Muammer Yildiz, with whom a collaboration had been planned since 2013.

In 2019, Muammer Yildiz wanted to run a 7.5-kW magnetic motor for three days in Belluno/Italy. But after

returned to Turkey with the generator and then had to undergo two heart operations. Further work is blocked.

In the case of the magnetic motor from Infinity SAV in South Korea, which the GAIA experts had seen in operation at least 80 times, there was a different problem: the inventor Andrii Slobodian died in a fire accident in 2019. Since he built all the components by hand and therefore progressed only slowly and kept having financial problems, he sold the 1-kW generator because he urgently needed money.

Parts of the Plexiglas prototype were destroyed in the fire. Numerous parts are at GAIA in Vienna. Out of eighteen worldwide distributors, sixteen have come together to pursue the development, but this is dragging on. These include distributors from Japan, Australia, D-A-CH countries, Finland, etc. Currently, the distributors are busy rebuilding the successor model, which hopefully will be ready soon. Roberto Reich from GAIA Energy GmbH has invested a lot of heart and soul. It was difficult to always reorient oneself.

The hydrogen project for domestic use from Asia, in which GAIA is coope-

Promising hydrogen project from Asia.

rating with the inventor, is promising. Since the patent has not yet been published, Roberto can say little about it. Only this: neither fossil fuels are needed nor CO2 emitted, it can be successfully reproduced and scaled up. Decentralised reservoirs for households with high potential for self-sufficiency are planned.

The projects of Holger T. Schubart from the Neutrino Group are also in line with GAIA's self-sufficiency motto for households. Roberto Reuter extended a greeting message to the participants.

When asked by participants what had happened to the Rosch 5 kW uplift power plant for GAIA members, Roberto Reuter replied that the project partner had cancelled the contract after the order quantity had been reached.

Roberto Reuter extended a message of greetings from Holger T. Schubart of the Neutrino Group in Berlin.

Agnihotra fire - ritual for environmental purification and healing

Stephan Wiethaler from the Homa-Hof in Heiligenberg/DE introduced his lecture with a film about the Agnihotra fire, which showed that this "sacred fire" in combination with the chanting of a mantra has a great effect on living beings and plants. It is said to be a fire technique that is thousands of years old and comes from the Vedas, with certain ingredients and a prescribed ritual. The fire radiates into the atmosphere and the cosmos, and the energy returns

to the earth and its living beings. In 1974 this ritual came to Germany and spread in Europe through writings and an exchange of experiences. The organic agriculture of the Wiethalers Homa farm was optimised by Agnihotra and caused increased growth of vegetables, fruits, salads without the use of pesticides.

The Agnihotra fire also brought an improvement to the bark beetle-infested forest, with the pests disappearing after one week. Vintners cultivate their vineyards and beekeepers their apiaries without using pesticides thanks to the Agnihotra fire. Kirlian photographs and Dr.

Blood count before and ten minutes after exposure to Agnihotra fire.

Stephan Wiethaler is a living example of the harmony and balance that the Agnihotra ritual is meant to facilitate.

The ingredients needed for an Agnihotra fire: Fire vessel, rice, ghee, cow dung, instructions, matches.

Emoto's crystal pictures make the effect visible. The ash from the Agnihotra fire also neutralises the radioactively contaminated soil in Fukushima. This was also shown by soil samples from Chernobyl.

In children with HIV/Aids, the Agnihotra fire caused a reduction of the viruses after one year. In one case, the application of Agnihotra ointment prevented a foot amputation after three weeks.

It is not a religion, but an ancient knowledge of mankind. Seminars were also attended by nuns and soldiers. Stephan Wiethaler informed that they send 8 tons of pressed cow dung per year from the Homa farm. Even a pinch of ash from the Agnihotra fire is very energetic and detoxifying.

At the end of August, a Homa meeting is held on the Homa farm with up to four hundred participants, with a wonderful atmosphere. In response to a question from the audience, Stephan Wiethaler said that the fire was more effective than the ashes, but that the ashes were good against electrosmog. This was

also confirmed by Dr Florian König, whose scientific measuring instruments had shown amazing results with ash.

To Willy Mohorn's question whether air ionisation is increased, Stephan Wiethaler answered in the affirmative, referring to the Agnihotra journal.

Using gravity as a driving force

Josef Mühl developed a device that uses gravity as the driving energy and in which, after one cycle, the potential energy is about 20% higher than the energy expended. He already presented this device at the congress on 18/19 September, where several engineers were able to look inside beforehand and see that there was no motor or battery installed.

Josef Mühl explained that he had studied free-energy devices for ten years and had partly copied them, without success. On 22 April 2022, while working in the garden, he had the idea for this device, which he immediately built. He refers to the study of natural energies, the four elements, gravitation, levitation, Paracelsus and Hermes Trismegistos. He has ideas for further deve-

lopment and ultimately wants to use this device to drive a generator.

He is keen to build everything himself and put his ideas into practice, but this can also be a team effort.

The presentation earned warm applause. One explained that this device would prove the function of the Bessler wheel.

HuMan economy as a counter-strategy to the central banking model

After Gerhard Steinbrunner had to cancel due to an accident, the organiser gave the Swiss financial expert Hans-Jürgen Klausner - until then "only" a congress participant - the opportunity to present his alternative money system (he also called it the "Gelt system" because it is not only about money but also about values, services and commodity exchange of services and products). It was - according to the subtitle of the lecture - "the end of the credit monopoly and the greatest system change of all times".

On the internet one can read that he had long distinguished himself in Switzerland, Germany and Austria as a money system innovator and lateral thinker.

The now 70-year-old market specialist for saturated markets - to which his three HuMan economics books refer -

Josef Mühl shows his device in which a ball moves as if by magic from the left, lower hole to the right, higher hole. Energy gain: approx. 20%.

launched his popular initiative to "eliminate the money shortage" on 8 April 2022. He predicted as early as 1996 that the "capitalist economic and interest-money system" was at its end and had already reached its ceiling by general market saturation. In fact, it was an unfair and antisocial system of central and big banks, in which banks enriched themselves through credit and the interest economy.

The speaker also distinguished himself as a system innovator in the Corona crisis, as he appeared on 4 October 2020 at an anti-Corona demonstration in Constance together with the well-known book author and speaker Klemens Kuby.

He also said in his speech at the congress that a bank crash is to be expected and that a large number of bank branches will soon be closed because they are no longer needed as lenders with central e-money (E = electronic of the central banks). After that, nothing would be the same as before. The central banks would no longer need village banks and certainly not "savings banks". The CBDC-providing central banks will no longer need physical money in the future.

Klaussner's EUROWEG also only needs the services and goods of working people to establish a Gelt system (with t because it comes from gelten) of the future, without central banks. The monopolised central banks would be a discontinued model and would be replaced

Hans-Jürgen Klaussner represents his HuMan money system confidently and with vehemence.

by the decentralised EUROWEG service clearing centres with only 10,000 accounts each (old bank money and new commodity credit gelt). His new EUROWEG monetary system is the only solution and a weapon against the centralist monopolism of the central banks, which have never been subordinate to the state and conduct their monetary policy independently according to the NWO elite.

Practically all states - with the exception of Switzerland - are highly indebted with more than 120% of GDP and are therefore under the orders of the money elite. Central banks are gigantic monopolies that pursue the world-government goals of the financial elite according to Klaus Schwab and want to implement them by 2030. They leave the man in the street standing in the void with a pittance of "basic income" so that they can continue to rule the state and its politicians as vassals in the debt trap. They have been doing this for over 50 years. The Corona dictatorship is proof that our politicians are only vassals of the monopoly banks' money system.

Why has the EUROWEG belt system not yet caught on?

No other global renewal movement would have such a strong wind blowing against it. A Russian economic attaché would have told him in 2001 that if he could publicise his HuMan economic system on Russian television, it would immediately trigger a revolution.

Since 2005/2016, he has developed the EUROWEG software for saturated markets. It is the basis of a barter

society with an integrated e-shop that will not need money in the future. The accounts of his software would belong to each individual.

He informed that he also produces the crystal water that detoxifies the body and thus also cleanses the mind and sensitises people to change the system.

Although he is Swiss, he has founded a party in Austria and therefore also has an account where he can accept bank deposits. To partners, for example, he sells shares starting at Fr. 1,000 for his European Capital Trust AG (EUROWEG clearing software department). The income and dividends for the shareholders come from the sale of the software licences, which he also offers to the now redundant banks as a new business model after the zero interest period.

The future therefore belongs to e-banking with his EUROWEG software - see www.euroweg.net.

With his system, people could say goodbye to the banking system. His software has been around since 2005, was renewed in 2016 and is currently being completely upgraded to the latest technology.

Banks see a great future for his software, "but they are not allowed to change over yet". Only when they have lost their old banking licence due to bankruptcy will they be forced to switch to EUROWEG. That would take another two to seven years. We would see it happen, even if the bankers thought they could delay their logical bankruptcy for another 30 years.

A core issue of the EUROWEG software, he said, was the legal protection of profits, because the state had committed itself in the constitution to safeguarding general prosperity and promoting equality of opportunity. This can never be achieved with the capitalism and gigantism of the banks and central banks, so they must be banned as enemies of the Swiss Federal Constitution according to Article 2.

In the HuMan economy without a lack of goods through the exchange of goods, one allows oneself and others to make an honest profit, because only those who allow others to do so can

Hans-Jürgen Klaussner and Clemens Kuby at the anti-Corona demonstration in Constance on 4 October 2020.

also make profits themselves and thus live decently in prosperity. This is possible worldwide because we can now install this system in the time of globalisation and the information age as a counter-model to the central bank concept of Klaus Schwab of the WEF and his clients as free citizens. The speaker called for people to start by opening accounts at

www.euroweg.net

In the discussion, someone asked who would supervise the administration of the new monetary system? Hans-Jürgen Klaussner answered ironically that if one answered: "Rothschild", one would have no problem. With EUROWEG, he said, the individual is his own independent money creator, not the system. There are many who join in and who in turn get friends and relatives to join in. The WEG clearing account belongs to the individual. The integrated bankruptcy insurance secures the credit on goods and there is no longer any possibility of a supplier going bankrupt.

One participant understood that with the WEG system there was no more shrinkage money or debt money. The question was, however, what would the grandmother do if she had no service to offer?

The speaker answered that many such people are needed as consumers. For example, he gives Africa a blank credit to buy the surplus of unsaleable goods from Europe that are sitting around and are used there. Without long-term credit, these goods will only rust. The fact that he is 70 years old and Swiss is considered a bonus in Africa, but his goal is for all mankind to be provided for and to be able to live in prosperity without scarcity. Money as a product is always in shortage and thus a means of power for the monopoly money elite. EUROWEG-Gelt as pure accounting knows no shortage and the world can produce all goods in abundance. What is still missing today is a Gelt system for the just distribution of this abundance. The HuMan economy was created for this purpose.

Driving with up to 50% added water

After this excursion into a new financial system, it felt quite good to deal with a practical technical development. Sven Mund had already presented his HHO kit at the Stuttgart Congress. Since his

Requests for Sven Mund to conduct workshops on the installation of HHO generators exploded after it became apparent that the water additive could save up to 50% fuel

HHO installation workshops were presented in No. 3/4 of the "NET Journal" 7, these activities had exploded and he was practically no longer active in his normal work as an IT and finance expert. He had not yet been able to answer all emails and was constantly receiving requests to conduct workshops. He had agreed with the Ireland supplier of a HHO kit that no more than five people should take part in each workshop so that each participant would be well informed. The normal price for the installation of a HHO kit in a car is 1'500 Euros, he offers it for 1'245 Euros with "NET-Bonus" including chip. Without chip, the installation costs 975 euros. Anyone can obtain a generator for their own experiments for 275 euros, independent of the workshops. At this congress, he also installed the HHO kit in two participants' cars.

The optimisation or saving of oil in oil heating systems with HHO kits is planned. In this regard, Sven Mund has contacted Dr. Florian König.

Enquiries about the installation of HHO generators in cars can be directed to:

Neutralisation of harmful radiation

The radiation researcher Dr. Sc. Florian König had registered as an exhibitor, but due to the omission of a speaker, he was able to present his self-developed systems under the title "Two ways for a bioconform climate". WLAN and mobile phones are operated at maximum frequencies, which is harmful to human organisms.

In Switzerland, a field study with Swisscom had been planned for 2021, which fell through because of Corona. Adolf Schneider interjected that the Minister of Health, Federal Councillor Alain Berset, had just opposed the

Dr. Sc. Florian König with his multi-chamber tubes for neutralising harmful radiation, even from 5G.

installation of a 5G antenna near his house, which was very explosive after all. This was all over the press, including the fact that his federal office is still informing the population that 5G is not harmful.

On the one hand, says Dr König, he has developed systems to neutralise such radiation, such as the MHR tubes, on the other hand, it is about the targeted use of natural spheric radiation, for example, in the form of the fair-weather device that anyone can hang around their neck. A study was conducted with the University of Freiburg and the Helmholtz Institute for 176,000 euros to measure weather sensitivity.

At his exhibition stand, one could measure a person's weather sensitivity within 40 seconds with the palm measuring device. He also took measurements before and after taking Agnihotra ash. Using a projected diagram of a lady, he presented the

improvement in the condition of the organs.

All in all, the discussion also showed the importance of Florian König's work in the current radiation-polluted world. www.sferics.eu

Spirit Vitalizer vortex device

Even before his short presentation, Manfred Pammer had set up his water vortex light column, which harmonised the atmosphere in the hall through the changing play of colours - according to Manfred Pammer, the colours correspond to the chakras.

Manfred Pammer explained that he had started developing the water vortex device twenty-five years ago and that he had been helped by the observation that people best rechar-

are three sizes of such devices. Healing stones can also be placed on the vortex device and their energy is then spread throughout the room. Plants in the vicinity thrive excellently. The radius of action is 15 m. In response to a question from the audience, Manfred Pammer said that the largest water column costs 5,000 euros, the middle one 3,000 euros.

wasser-wirbel-licht-saeule.htm

Visualisation of higher-dimensional spaces

It was a challenge for the participants to follow the explanations of the artistic researcher, Dr.phil. Mag. art. Renate Quehenberg from Vienna.

Using 3D animations, she presented her hypereuclidean geometry, which she claims is only rediscovered and represents the ancient higher-dimensional knowledge from the ancient Egyptians via Pythagoras and Plato, according to which the cosmos is a living being.

The understanding of higher-dimensional geometry helps us to better understand physical systems -

such as those of free energy - especially since higher-dimensional spaces ($D > 3$) are to be thought in motion.

She refers to Gustav T. Fechner, who already in 1846 described how the space of four dimensions sweeps over us, so that we find ourselves in a new space at every moment.

Renate Quehenberg's visualisation clearly shows that Plato meant by the 5th element, what Aristotle calls the quintessence, the building blocks of 5-dimensional space, which in combination results in the dodecahedron and also that 4-dimensional moving dodecahedron space that Henri Poincaré still proposed as a model for the universe. In any case, we need a new world view, because according to Plato and Poincaré we live in a dodecahedron universe that functions like a perpetual motion machine. This is precisely the cosmic energy that is the subject of the congress.

Adolf Schneider thanked this demanding presentation by saying that the participants had gained insights into geometry, mathematics and still unknown fields.

Manfred Pammer with his water vortex device. The water vortex constantly changes colours over the entire rainbow spectrum.

ge their batteries in nature, at a waterfall, stream or lake.

Healing springs also inspired him to develop this device.

This one took two and a half years of work and has now been functioning for twenty years. The devices are not only beautiful, but also effective and absorb and optimise harmful energies, which is proven by crystal images. There

Penrose tiling (tiling = parcelling, parquetising) is the pattern of the golden section in the plane.

Dipl.-Ing. Roland Gumpert presented his methanol car, which produces an infinite amount of electrical energy thanks to the use of a fuel cell.

The surprise guest

Inge Schneider introduced the eagerly awaited surprise guest by saying that there is always criticism that too much theory and too little practice, too much software and too little hardware is shown at congresses. Even if the final guest also needed words for his presentation, the participants could be sure: he represented hardware like hardly anyone else!

The title of Dipl.-Ing. Roland Gumpert's presentation perfectly matched the congress theme: "Limitless electric driving". As soon as he stepped onto the podium, he was greeted with warm applause. He informed the audience that the methanol he uses is produced from gas. This means that with the help of a fuel cell, it is possible to drive electrically indefinitely.

This is actually a revolution, he said, but politicians and car companies today are increasingly concentrating only on electric mobility.

His process can be used to power lorries, cars, ships and aeroplanes, whereas e-mobility would have its limits.

The van pictured above can be refuelled in 5 minutes and covers the distance Munich-Graz and back

purely electrically, without refuelling and without emissions.

He was convinced that the Gumpert Power Cell and green methanol are the future of CO₂-neutral mobility. Every petrol station can be converted to methanol for little cost. It does not burden the power grid because it produces the electricity itself. Methanol is also biodegradable.

The above-mentioned drive was accompanied by TV and TÜV. The methanol consumption was 14.5 litres/100 km. In 2017 he founded the racing car division, and in 2022 Gumpert Automobile in Denmark.

Despite - or perhaps because of - the successes, he faces a lot of headwind. Quote: "Bayer needs no justification!" The hydrogen lobby and the e-lobby are also against him. Yet the future belongs to methanol, which is so easy to use: 1. fill up with methanol, 2. methanol is converted into electricity, 3. drive in a CO₂-neutral way without limits. What is also needed is a 5 kW fuel cell, electricity and hot water.

In 2019, there was a smart proof that was viewed 5.5 million times. This was scheduled for presentation at the Geneva Motor Show, but was

cancelled due to corona. In response, he and his team have moved to small trucks, but the Smart can still be ordered, he said.

The discussion was lively and it turned out that the organiser had guessed right with this surprise guest, even more so when Roland Gumpert's methanol-powered Mercedes transporter could be admired in front of the hotel. In any case, it was a fascinating conclusion to a congress that will be the talk of the town in the future.
